**Re Item V.**

- 1 The following documents are referred to in this communication:

D1 : DE 100 29 159 A (BERGER ERWIN) 17 January 2002 (2002-01-17)

- 2 Document D1, which is considered to represent the most relevant state of the art, discloses (the references in parenthesis applying to this document):

An improved universal stand including a standard base (8), two vertical support members (7) one of which can be fixed and the other is movable by moving its foot along the length of the leg of said base, has two horizontal support members (20) fixed on the top of the vertical support members (7), said horizontal support members being tubes, two rotatable adjustable arms (10) having a plurality of holes (26), each of said arms placed into respective horizontal support members, a pair of carrying plates (2) and adjustable handles (38).

From this, the subject-matter of independent claim 1 differs in that:

There are a plurality of parallel circles of holes in the rotatable adjustable arms, the handles have an elongated slot to be adjustably attached on the respective plates and there is a carrier means and a crib attached to the stand.

- 2.1 The subject-matter of claim 1 is therefore novel (Article 33(2) PCT)

- 3 For the purpose of easy centring of a workpiece between the vertical supports, without adapters the concept of having a plurality of parallel circles of holes in the rotatable adjustable arms such that both the arms can be adjusted towards and away from each other remains without example in the prior art presently available.
